

# Module 1: Introduction to Machine Learning and Entity Resolution

Rebecca C. Steorts

Reading: Binette and Steorts (2022)

August 15, 2024

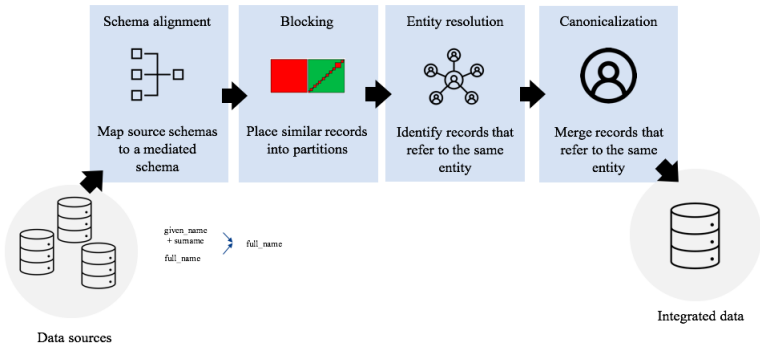

“Statistics is the science of learning from data. Machine Learning (ML) is the science of learning from data. These fields are identical in intent although they differ in their history, conventions, emphasis and culture.”

- Larry Wasserman, Rise of the Machines

What are some examples that you have learned of machine learning in prior classes, internships, or elsewhere?

- Machine learning and statistics have much to learn from each other.
- In this course, we will focus on machine learning, whereas in other courses, you will learn the fundamentals of statistics.
- To be successful, you need both insights and perspectives. (As a follow up class, take Cynthia Rudin's machine learning course).

In this course, we're going to focus on one type of practical, applied machine learning that appears widely in both industry and academia, known as “data cleaning.”

Let's consider a simple data cleaning application.

The image shows a Spotify playlist titled "harvest-moon" by the user "resteorts". The playlist contains 5 songs with a total duration of 26 minutes and 53 seconds. The interface includes a play button, a list icon, and a table of songs.

#	Title	Album	Date added	
1	Harvest Moon Neil Young	Harvest Moon	2 minutes ago	5:03
2	Harvest Moon Neil Young	Harvest Moon	2 minutes ago	5:03
3	Harvest Moon The Brothers Comatose, AJ Lee & Blue Summit	Harvest Moon	2 minutes ago	4:42
4	Harvest Moon - Recorded at Spotify Studi... Lord Huron	Spotify Singles	1 minute ago	5:46
5	Harvest Moon - Live The Mavericks	All Night Live, Vol. 1	1 minute ago	6:18

Figure: How many unique songs can you identify visually?

The screenshot shows a Spotify playlist interface. At the top, there's a header with a silhouette of a person in a field, the title 'harvest-moon' in large white font, and a subtitle 'resteorts • 5 songs, 26 min 53 sec'. To the right of the title are buttons for 'Install App', a notification bell, and a profile icon 'R'. Below the header is a green play button and a three-dot menu. The main content is a table of songs.

#	Title	Album	Date added	
1	 <b>Harvest Moon</b> Neil Young	Harvest Moon	2 minutes ago	5:03
2	 <b>Harvest Moon</b> Neil Young	Harvest Moon	2 minutes ago	5:03
3	 <b>Harvest Moon</b> The Brothers Comatose, AJ Lee & Blue Summit	Harvest Moon	2 minutes ago	4:42
4	 <b>Harvest Moon - Recorded at Spotify Studi...</b> Lord Huron	Spotify Singles	1 minute ago	5:46
5	 <b>Harvest Moon - Live</b> The Mavericks	All Night Live, Vol. 1	1 minute ago	6:18

**Figure:** How could you automate this with millions of songs to have a clean, unique database of songs?

Let's consider a more challenging one!

Figure: Snapshot from the North Carolina Voter Registration Data Set

- Can you think of other applications where entity resolution would be needed or you have seen this before?
- Can you think of why the problem would be important?
- Can you think of some challenges of this problem?
- Why does this problem impact general machine learning, such as prediction and inference?
